REHAN ALI

Full-Stack Developer | Lahore, Punjab, Pakistan

Subject: Application for Full-Stack Developer Position:

Subject: Application for Full-Stack Developer Position Dear Hiring Manager, I am writing to apply for the Full-Stack Developer position at your organization. I am a Full-Stack Developer Intern at Tech Vezoto with hands-on experience building modern web applications using React, TypeScript, Node.js, NestJS and MongoDB. I am now looking for an opportunity where I can contribute to a professional engineering team while continuing to grow as a software developer.

In my current internship, I work across both frontend and backend development. My experience includes building React and TypeScript interfaces, developing NestJS REST APIs, integrating MongoDB with Mongoose, implementing JWT authentication and role-based access control, configuring CORS and environment variables, and working with real-time WebSocket functionality. I also use Git and GitHub and have practical exposure to deploying and troubleshooting production applications.

I have independently built and worked on several full-stack projects, including LiveMeet, a real-time meeting platform; a CMS with authentication, content management and media uploads; an e-commerce application; and a school management dashboard. These projects have helped me develop practical problem-solving skills and understand how frontend, backend, database and deployment layers work together.

I would welcome the opportunity to bring my practical development experience, willingness to learn and full-stack mindset to your team. I am particularly interested in roles involving React, TypeScript, Node.js, NestJS and modern web application development.

Thank you for considering my application. I would appreciate the opportunity to discuss how my skills and project experience can contribute to your team.

Sincerely,

Rehan Ali
